Cloud Content Management for Enterprise Workgroups
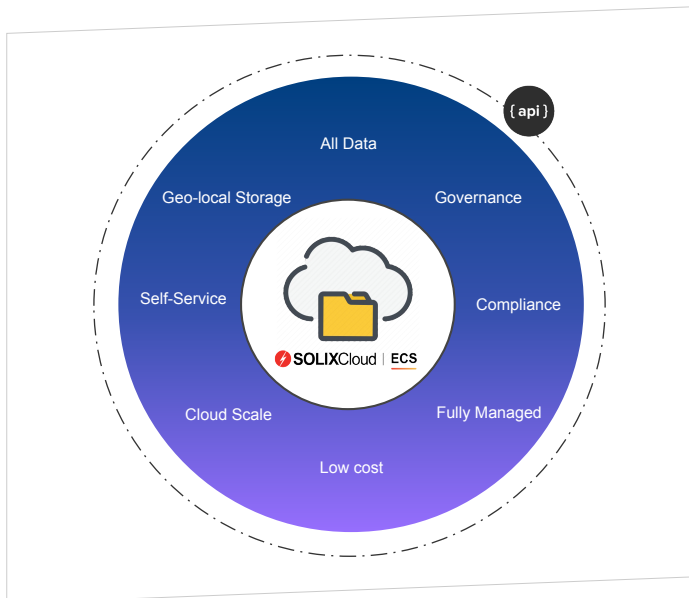

Empower workgroups with secure and intelligent cloud content services platform

Overview
Across enterprises, workgroups/departments are burdened with a multitude of digital and paper-based content silos (active and legacy), adversely impacting information availability, productivity, collaboration, and regulatory compliance. As organizations transform to enable seamless digital experiences for employees and customers, it is imperative to empower workgroups with a unified and modern cloud approach to content management.

Introducing SOLIX ECS
SOLIX ECS is a secure cloud platform to centralize enterprise content management and empower workgroups to seamlessly bring together content, people, processes, and policies.

HIGHLIGHTS

Content Cloud: Cloud platform with a limitless capacity for all types and formats of work group content.

Unlimited User Licenses*: Empower every member of the workgroup to achieve seamless digital transformation

Governance & Compliance: Automate data retention, classification, privacy, access & compliance at scale

Power Digital Content Apps: Secure portfolio of APIs to extend ECS functionality into digital apps

Information Archiving: Low-cost, policy-driven, cloud archiving for files, email, and application content.

Data Security: Secure authentication, permission-based access with always-on data encryption to keep content secure all the time

Central controls: Regain control with a centralized content repository and enterprise-grade controls.

Fully Managed SaaS: 99.9% uptime SLA, 99.9999999999's of data durability, and scales instantly to meet requirements

Low cost: Just pay for the storage you need. All platform capabilities are included.

KEY FEATURES

Self-Service Data Experiences
Provide self-service data experiences for workgroups in compliance with organizational policies. Workgroups can add, organize, browse, access, collaborate, and even set reminders without any support from IT.

Powerful Search
Finding the right piece of content quickly and efficiently is crucial for the productivity of workgroups, compliance officers, and IT personnel. The advanced search capabilities help scan through petabytes of data efficiently to instantly find specific files of interest.

Users can search by metadata, tags, and full file content. Simple filtering capabilities help speed up and improve discovery further.

Secure Sharing & Collaboration
Solix ECS is designed to provide self-service data experiences. Employees, customers, auditors, partners, and applications can now share and collaborate seamlessly and securely.

The self-service portal allows everyone with permission to upload/download, browse, share, search, organize, govern, and access content securely anytime from anywhere.

Automation
Leverage the power of ML and AI to help improve productivity and scale your operations with automated file capturing, document reminders, workflows, classifications, retention, legal hold, document data extraction, and much more.

Governance & Compliance
Workgroups must deal with a rapidly evolving data security and compliance landscape. The comprehensive information governance, audit and security features help automate data classification, data protection, data retention, and Ediscovery with granular permission-based access. In addition, the global network of data centers helps meet data residency requirements for compliance.

Central Administration
Disparate data across workgroups can now be organized and managed in a central repository. With centralized administration capabilities, IT and compliance teams gain enterprise-wide visibility and control over the content. User management and administrative roles help further, bolster organizational control and ensure data security.

Digital Content Apps
Build intelligent content applications such as claims processing, loan application, or vendor onboarding apps easily with a comprehensive set of ECS APIs. Additionally, automate retention and classification for the documents being ingested via the apps. The APIs can extend ECS file management and search into existing workgroup applications.

Do more with SOLIXCloud ECS

Information Archiving: Enable a cloud archive for workgroup file servers, records (HR, reports, invoices), email, media assets, and applications for long-term retention and compliance.

Client Portal: With no limits on user licenses, organizations can extend their centralized ECS cloud repository not just for workgroups and individual employees but also partners, suppliers, and customers.

Intelligent Document Extraction: GiaDocs enabled AI-driven Cognitive Data Capture for Receivables helps automate data extraction from unstructured data such as invoices, checks, lockbox files, remittance advice, and more. This capability consolidates, scans, and extracts the information and makes it searchable and actionable.

Workflows to Digitize Processes: Streamline and accelerate processes by digitizing processes involving document reviews and approvals with ECS Content workflows.
