- Self-service access to archived emails for Business, compliance and legal users

- Supervision emails easily with active classification, monitoring and alerts Part of the Solix Enterprise Archiving suite.

- Expand capabilities to archive all types of enterprise data (apps, files, emails and more)

- Deploy on-prem or on the cloud. The choice is yours.

THE CHALLENGE

Email continues to be the No.1 communication and collaboration tool for businesses of all sizes across the world. As such, 60% of these emails consist of business-critical and sensitive information making them vital for business conduct and compliance. However, due to the rapid growth in email data and increasingly stringent regulations, enterprises are seeing an unsustainable steep rise in IT and compliance costs related to email data.

Solix Email Archiving

Aimed at simplifying eDiscovery, compliance, and management of email growth, Solix email archiving, offers a secure, highly scalable and business user-friendly email archiving solution for enterprises of all sizes. With support for archiving from legacy on-prem email systems, email backups, and modern cloud-based email systems, Solix offers a seamless archiving strategy for all historic and current email data.

THE SOLIX ADVANTAGE

Part of Solix Enterprise Archiving Suite
Aimed at simplifying eDiscovery, compliance, and management of email growth, Solix email archiving, offers a secure, highly scalable and business user-friendly email archiving solution for enterprises of all sizes. With support for archiving from legacy on-prem email systems, email backups, and modern cloud-based email systems, Solix offers a seamless archiving strategy for all historic and current email data.

Capture & Archive All Email Data
Using multiple collection methods such as Journaling, mailbox synchronization, and file uploads, organizations can now capture and archive all current outgoing and incoming emails and historic email data into a single archive repository that is easy to search and retrieve.

### Comprehensive Capture & Indexing
Makes a copy of all original email data including the email content, detailed metadata along with attachments and performs a full index for efficient search and discovery in the future.

Classify, Tag and Monitor Emails for Easier Supervision
Create custom policies to classify and monitor emails in near real-time based on email content, metadata, or presence of sensitive information. Trigger alerts to respective teams based on criteria to ensure swift action. Add additional tags to emails as necessary. All of this helps you stay compliant, monitor undesired activities and make your emails easily discoverable in the future for faster compliance.

Enforce Retention and Legal Hold Policies
Compliance and legal teams can create comprehensive retention and legal holds at an organization, user, email or metadata level easily to help with faster and effective implementation of retention and legal hold policies.

Powerful Search for eDiscovery with Case Folders
Compliance and legal teams will be able to perform faster and efficient eDiscovery searches across all inboxes based on a keyword and/or multiple filters to quickly identify emails of interest. They will be able to add retention, legal hold, tags or comments on the emails identified. They also will be able to add one or all emails from the search to a case folder for future reference and for downloading them in popular industry formats for fulfilling legal requests.
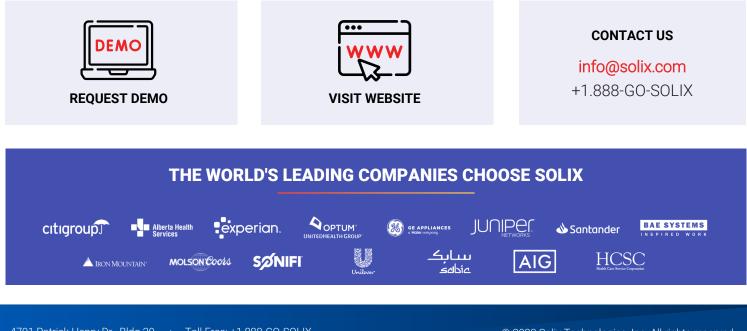

Self-service Access to Archived Emails
When emails are archived, end-users tend to lose direct access to those emails. No wonder business users retain their own .pst copies of emails for future reference. With

SOLIX Email Archiving there is no need for business users to maintain local .pst copies of archived emails, they will get their own login to view and access their archived emails in an email client-like interface. Powered by an advanced search that can search across email content, metadata and content of attachments, finding specific archived emails will be a breeze. The search is so advanced, users will be glad their emails are archived.

Reduce Storage from Email Systems
Administrators can define archive and purge policies to ensure emails are retained in source only for the specified period. Post the retention period emails, archived emails are safely purged from the source thus freeing up critical storage in the source system greatly helping reduce costs and maintenance.
